

RPD RESISTANCE PHASE DAMPING™

Resistance Phase Damping stops vibration at the source – resulting in our smoothest shooting archery system to date. This first of it's kind innovation **tackles excess energy** directly in the limbs – significantly **deadening** and **silencing post-shot vibration**. This next generation of Mathews' damping results in the stealthiest hunting bow we've ever created. ▶

BRIDGE-LOCK™ STABILIZER

Now featuring our exclusive **Bridge-Lock Technology**, ▲ the new Bridge-Lock Stabilizers offer **improved balance points** and a **stiffer connection** to your bow for added vibration dampening and enhanced stabilization.

ELEVATING THE ARCHERY EXPERIENCE.

PHASE 4™

The all-new 2023 **Phase4** is our most efficient hunting system to date. This year we challenged ourselves to innovate at the leading edge of what physics will allow in a hunting bow. By **damping vibration directly in the limbs**, we are able to drastically **reduce** downstream **wasted energy** felt in the hand during and after the shot. Combined with our new Bridge-Lock Stabilizers that offer **improved balance points**, increased **harmonic tunability** and a more **robust connection** to your bow, the Phase4 is the most advanced and adaptable hunting system we've ever designed.

BRIDGE-LOCK™ STABILIZER

Utilizing our exclusive Bridge-Lock Technology, these new stabilizers integrate directly into the riser creating a more rigid connection and better balance point. Featuring our patent pending InterLink™ Weight Technology and a quick-disconnect knob allowing adjustability in 1/2" increments, the Bridge-Lock Stabilizers offer a new level of harmonic tuning and customization in a single bar.

BRIDGE-LOCK ADJUSTABLE V-BAR

The Bridge-Lock Adjustable V-Bar paired with the new Bridge-Lock Stabilizer creates an entirely new axis of customization and adjustability for your rear facing stabilizer. Adjustable in 1/2 inch increments, you can modify the length of your rear facing stabilizer for a finer, more balanced hold. An integrated quick-disconnect allows you to easily remove or stow your rear facing stabilizer while not in use or during transport.

IMAGE™

Adapted from our most popular hunting bow to-date, the new 2023 **Image** was created specifically for any hunter requiring a **lower draw weight**.

Available in **40, 43, 47** and **50** pound peak weights, each set of mods are engineered for an incredibly smooth draw while still producing speeds up to 335 fps. Equipped with our exclusive **Bridge-Lock Technology**, we have brought the same premium features from our flagship bows and made them available to low poundage archers.
